PERKS OF SUSTAINABILITY

- ✔ Save money by cutting costs
- ✔ Decrease dependency on fossil fuels
- ✔ Create a drought-conscious property
- ✔ Increase real estate value
- ✔ Reduce carbon footprint

Solar Energy

Castle Breckenridge can help you increase your property's appeal and decrease your carbon footprint by switching to solar power.

Xeriscape Landscaping

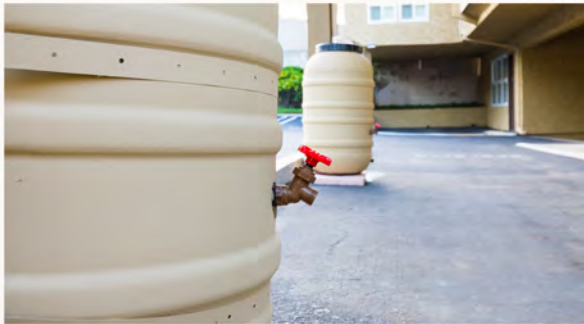

Going Xeriscape is a drought-friendly approach to landscaping. Native, drought-resistant plants can cut your water usage by up to 50%. Cool shade trees slow evaporation and reduce heat from the sun.

LED Lighting

LED Lighting is an effective way to cut monthly electricity costs. Updating your lighting can not only save you money, but reduces dependency on fossil fuels by using less energy and cutting lighting expenses by up to 90%.

Low Flow Technology

Low flow toilets, faucets and showers are a smart addition to your property that save you money and support low-impact living. Changing to a low-flow toilet alone can save a family of four up to 22,000 gallons of water per year.

COLLECT & REUSE WITH RAIN BARRELS

Rain barrels and storage tanks are popular and effective ways to gather and reuse water. We can help design & implement a system for your property that saves you money by reducing your water bill.

LOW FINANCE OPTIONS AVAILABLE

We know large scale commercial upgrades such as photovoltaic systems can be costly. Our low cost financing can help make these projects more accessible.

SPECIALIZED RECYCLING SERVICES

Recycling is an easy and low cost way to help the environment. Services we offer include recycling of green waste, electronics, printer cartridges, fluorescent lights, and more.
